### REC\_DS using C\_Week 7\_COD\_Question 1

Attempt : 1  
Total Mark : 10  
Marks Obtained : 10

#### **Section 1 : Coding**

##### **1. Problem Statement**

Ravi is building a basic hash table to manage student roll numbers for quick lookup. He decides to use Linear Probing to handle collisions.

Implement a hash table using linear probing where:

The hash function is:  $\text{index} = \text{roll\_number \% table\_size}$  On collision, check subsequent indexes ( $i+1, i+2, \dots$ ) until an empty slot is found.

You need to:

Insert a list of  $n$  student roll numbers into the hash table. Print the final state of the hash table. If a slot is empty, print -1.

#### ***Input Format***

The first line of the input contains two integers  $n$  and  $\text{table\_size}$ , where  $n$  is the

number of roll numbers to be inserted, and table\_size is the size of the hash table.

The second line contains n space-separated integers — the roll numbers to insert into the hash table.

### ***Output Format***

The output should print a single line with table\_size space-separated integers representing the final state of the hash table after all insertions.

If any slot remains unoccupied, it should be represented as -1.

Refer to the sample output for formatting specifications.

### ***Sample Test Case***

Input: 4 7  
50 700 76 85  
Output: 700 50 85 -1 -1 -1 76

### ***Answer***

```
#include <stdio.h>

#define MAX 100
#include <stdio.h>

#define MAX 100
void initializeTable(int table[], int size) {
    for (int i = 0; i < size; i++) {
        table[i] = -1;
    }
}

int linearProbe(int table[], int size, int num) {
    int index = num % size;
    int originalIndex = index;
    while (table[index] != -1) {
        index = (index + 1) % size;
        if (index == originalIndex) {
```

```

        return -1;
    }
    return index;
}

void insertIntoHashTable(int table[], int size, int arr[], int n) {
    for (int i = 0; i < n; i++) {
        int index = linearProbe(table, size, arr[i]);
        if (index != -1) {
            table[index] = arr[i];
        }
    }
}

void printTable(int table[], int size) {
    for (int i = 0; i < size; i++) {
        printf("%d ", table[i]);
    }
}

int main() {
    int n, table_size;
    scanf("%d %d", &n, &table_size);

    int arr[MAX];
    int table[MAX];

    for (int i = 0; i < n; i++)
        scanf("%d", &arr[i]);

    initializeTable(table, table_size);
    insertIntoHashTable(table, table_size, arr, n);
    printTable(table, table_size);

    return 0;
}

```

**Status :** Correct

**Marks :** 10/10
